

For billing purposes, meters are read in **thousands of gallons**. The meter above represents 40,000 gallons of water registered on this meter since being manufactured and would read as 40 under the “Current Meter Reading” column on your monthly utility bill. The leak indicator (white triangle) will spin when water advances through the meter. If no water is being used and the leak indicator continues to spin, there may be a possible leak. *Note: meter dials/appearance may vary based on manufacturer, but are still read in **thousands of gallons**.*
